8. Write **Introduction Section** of a report for any one of the following topics.
 - a. Progress report on Pharmaceutical Care for COVID patients in Dhulikhel Hospital
 - b. Research Report on students' engagement on social network
9. Present an analysis and evaluation of the following paragraphs.

What is the single most important quality that suits you for a career in science? People often say "curiosity," but surely that can't be the whole story. After all, *everyone* is curious to some degree, but not everyone is destined to be a scientist. I would argue that you need to be obsessively, passionately, almost pathologically curious. Or, as Peter Medawar once said, you need to "experience physical discomfort when there is incomprehension." Curiosity needs to dominate your life.

Science is a love affair with nature – a love affair that has all the obsessive qualities, the turbulence, the passionate yearning that one commonly associates with romantic love. But where does this yearning come from? To some extent, it is probably an innate personality trait. But more important, it arises from your early associations. I realized a long time ago that the best formula for success is to be around people who are passionate and enthusiastic about what they do, for there is nothing more contagious than enthusiasm.
